11.WIRING

Take the following precautions before wiring your system. Disconnect the negative battery terminal before making any wiring connections.

Be particularly careful where you rout wires and cables. Keep them away from the engine,exhaust system,etc. Heat may damage wires.Sharp edges can pierce wire insulation and cable jacket, causing short circuits,damage to the craft,blown fuses and system failure.

If any fuse should blow,make sure all connections are correct and no wires are damaged before replacing the fuse. Always use fuses that are the same amperage value as the original.When replacing a fuse,never let the battery side touch any metal part or any other wire.

After fix the installation screws, put the four spigots into the holes.
Note: There are 1, 2, 3,4 marks at the bottom of the spigot.

Put the cover on the device.
