

Veigel Hybrid

Product details

The pedal feel for the instructor is hardly distinguishable from conventional rod-based systems. The high-tech cables are thermally pre-stretched and thus create a consistent connection between the pedals which will not degrade over time. The Veigel Hybrid is available for automatic and manual vehicles.

When the optional accelerator is installed with the Veigel Hybrid, the acceleration is performed electronically, allowing it to reproduce the acceleration of the original onboard accelerator pedal 1:1. It also allows the driving instructor to easily takeover via the electronic acceleration system

Characteristics

- Innovative design – suitable for electric vehicles as well as vehicles with limited footwell space
- Improved control mechanism
- Increased safety – high performance cable system – resistant up to 1,3 tons
- Resistant and long lasting – more than 4 million cycles
- Driving instructor can easily takeover via the electronic acceleration system
- Significant reduction of installation time – just one person needed
