KONFORT 760R RECOMMENDED BY MAZDA

The KONFORT 760R air conditioning service station has attained another prestigious reward. Mazda has approved and recommended the use of KONFORT 760R for vehicles equipped with the new refrigerant R1234yf. This recognition has been obtained as a result of rigorous testing. To obtain the approval of the prestigious Japanese automaker, TEXA has proved its high standard of product, distribution support and service assistance.

The Mazda recommendation is added to those of Mercedes-Benz, Hyundai, Kia, Opel, Vauxhall, Chevrolet Europa, Toyota, Subaru.

Presented at the Frankfurt Automechanika trade show, the new KONFORT line immediately impressed the market, thanks to its impressive technical innovation, guaranteed by eight international deposited patents. The TEXA refrigerant gas analyser, an optional to prevent contamination, has three other international patents. The production line of the KONFORT, in the new modern plant in Treviso, is fully automated, in order to ensure the highest possible quality. The KONFORT 770S model is recommended by the German vehicle manufacturers.

TEXA was founded in Monastier di Treviso in 1992. Today, TEXA is Europe's top name in the design, production and sale of diagnostic tools for cars, bikes, commercial and agricultural vehicles and marine engines. TEXA has an extensive network of distributors all over the world as well as direct subsidiaries in Spain, France, the U.K., Germany, Poland, Russia, the United States and Japan. TEXA currently employs around 450 people worldwide. TEXA's workforce is young and dynamic (average age is only 32); 45% are graduates, including around 100 engineers and R&D specialists.
