Keep SCR Systems Running AdBlue Urea Filters from febi

AdBlue Urea filters ensure that no contaminants enter the metering unit to guarantee long component service lives. The mesh and change intervals are comparable to those of a diesel fuel filter. If the filter is clogged or the SCR system no longer functions due to neglected maintenance or damaged components, the engine control unit will switch to an emergency program. Engine speed and power will be reduced depending on vehicle type. If the fault in the system is not rectified, the drive to the closest garage will happen at walking speed in the worst case.

For Scania vehicles febi offers the AdBlue Urea Filter 179708, which includes a special tool looking like a hook. To easily remove the old filter from the filter housing, the hook is screwed into the filter and then pulled out of the housing.

febi offers the widest range of AdBlue Urea filters, making it your No. 1 on the independent aftermarket for AdBlue Urea filters. We're even taking things a step further – in addition to filters, we offer many other SCR system parts as well.
